

Name: \_\_\_\_\_

**Bay Area Lyme**  
FOUNDATION

EclipseCrossword.com

**DOWN**

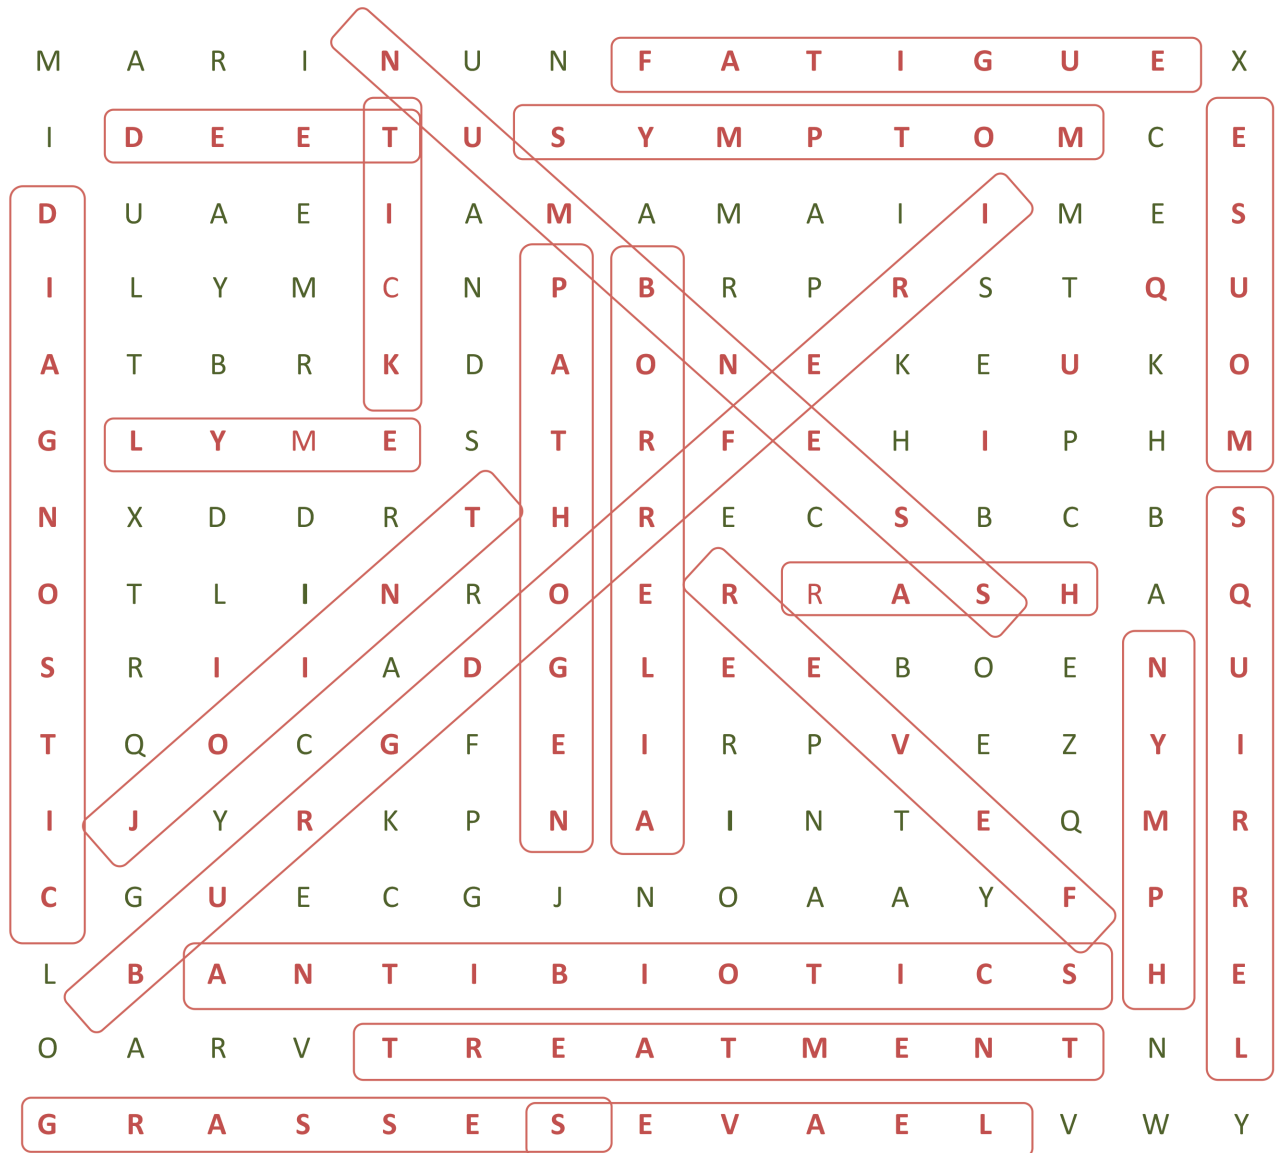

2. The most common Lyme disease host here in CA.
3. Under a microscope, the bacteria looks like little spiral-shaped worms called \_\_\_\_\_.
4. When you brush against these plants along a trail, ticks can jump on to you as you pass by.
6. A young, fully formed tick is called a \_\_\_\_\_.
7. The most common treatment for Lyme disease is this type of medicine.
8. Lyme disease is not a virus. It is a \_\_\_\_\_ infection.

**ACROSS**

1. The bacteria that causes Lyme disease lives in this part of the tick's body.
3. Another place that ticks like to hang out. These types of plants grow alongside trails and provide an additional tick habitat.
5. Ticks like to live in piles of \_\_\_\_\_ that gather under trees in the fall.
8. The infection replicates in this part of a human's body, eventually migrating to all parts of the body, including the brain.
9. Animals that ticks feed off of. Lyme disease spreads when the \_\_\_\_\_ is infected with Lyme disease.
10. When the tick is attached and feeding, the bacteria migrates into the tick's \_\_\_\_\_.
11. Ticks lay these to perpetuate their species.
12. The tick's mouth parts that pierce the skin to enable the tick to feed.
13. Ticks grow in stages; each stage has a specific name. This is the grub stage.
14. This CAN be an early symptom of Lyme's, but not everyone develops this reaction to a tick bite.
